Contributors to This Issue

Eshrat Arjomandi is a Professor of Computer Science at York University. She received her Ph.D. and M.Sc. degrees in Computer Science from the University of Toronto. Her research interests are in the areas of object-oriented programming and concurrency. She can be reached at the Department of Computer Science, York University, North York (Toronto), Ontario, M3J-1P3, Canada (electronic mail: eshrat@cs.yorku.ca).

Mustaque Ahamad is an Associate Professor in the College of Computing at the Georgia Institute of Technology. He received his M.S. and Ph.D. degrees in Computer Science from the State University of New York at Stony Brook in 1983 and 1985 respectively. His research interests include distributed operating systems, distributed object systems, and system support for distributed services. He can be reached at mustaq@cc.gatech.edu.

Krishna Bharat (bharat@src.dec.com) is a member of the technical staff at DEC Systems Research Center, Palo Alto, California, working in the area of user interfaces and distributed applications. At the time this work was begun he was a Ph.D. student at Georgia Tech, doing a research internship at Sun Microsystems Laboratories (East).

Murthy Devarakonda received his Ph.D. in Computer Science from the University of Illinois at Urbana-Champaign in 1988. Since then he has been with the IBM Thomas J. Watson Research Center in Hawthorne. At the present, he manages the Object-Oriented Systems Technology group focusing on the operating environment for Java-based network computers. In the past, he worked on a scalable, recoverable cluster file system called Calypso. He can be reached at mdev@watson.ibm.com.

Tim Harrison is a graduate student in Computer Science at Washington University, St. Louis, where he does research on strategies and tools for concurrent and distributed object-oriented programming. He has consulted for Motorola, Kodak, SIEMENS, and McDonnell Douglas, building concurrent networking software for communications systems and medical imaging systems on Windows NT and UNIX platforms using CORBA and C++.

Rammohan Kordale is presently working on his Ph.D. at the College of Computing at Georgia Tech. His research interests include distributed operating systems and distributed object systems with particular emphasis on consistency of shared information in large scale distributed systems. He can be reached at kram@cc.gatech.edu.

William O'Farrell is an Advisory Development Analyst with Toronto Lab, IBM Canada. He received his Ph.D. in Computer Science from Syracuse University and his M.Sc. from Queens University. His research interests are in the areas of parallel programming, object-oriented concurrent systems, and programming languages. He can be reached at IBM Toronto Lab, IBM Canada, 1150 Eglinton, Toronto, Ontario, M3C-1H7, Canada (electronic mail: billo@vnet.ibm.com).

Irfan Pyarali is a software engineer with Eastman Kodak. He has done extensive work on a large scale, high-speed, distributed medical imaging project which serves a network of hospitals. His areas of expertise includes high speed object oriented systems, CORBA, and C++.

Roger Riggs (roger.riggs@sun.com) is a Staff Engineer at JavaSoft, working on large scale distribution and reliable distributed systems. Prior to joining the group, he worked on client-server text retrieval and CORBA based information retrieval, and scalability issues on the Web.

Douglas C. Schmidt is an Assistant Professor of Computer Science at Washington University in St. Louis, Missouri. His research focuses on design patterns, implementation, and experimental analysis of object-oriented techniques for developing high-performance distributed communication systems on parallel processing platforms that run over high-speed networks. Dr. Schmidt is a co-editor on a book entitled *Pattern Languages of Program Design* and he is editor-in-chief of the *C++ Report* magazine. He can be reached at schmidt@cs.wustl.edu.

Jim Waldo (jim.waldo@sun.com) is a Senior Staff Engineer at JavaSoft, working in the area of reliable large-scale distributed systems. Prior to joining Sun, he worked in distributed systems and object-oriented software development at Apollo Computer (later Hewlett Packard), where he was one of the original designers of what has become the Common Object Request Broker Architecture (CORBA).

Gregory V. Wilson received a B.Sc. in Engineering from Queen's University in 1984, an M.Sc. in Artificial Intelligence from the University of Edinburgh in 1986, and a Ph.D. in Computer Science, also from the University of Edinburgh, in 1993. After six years at the Edinburgh Parallel Computing Centre, and several post-doctoral positions, he joined IBM Canada's Centre for Advanced Studies in 1995. Since this article was written, he has left IBM to join Visible Decisions in Toronto. Wilson is the author of *Practical Parallel Programming*, and co-editor of *Parallel Programming Using C++*, both published by MIT Press. He can be reached at gwilson@interlog.com.

Ann Wollrath (ann.wollrath@sun.com) is a Staff Engineer at JavaSoft, working in the area of reliable large-scale distributed systems. Prior to joining Sun, she worked in the Parallel Computing Group at the MITRE Corporation investigating optimistic execution schemes for parallelizing sequential object-oriented programs.
