# Compliance approaches

## Automated Policy

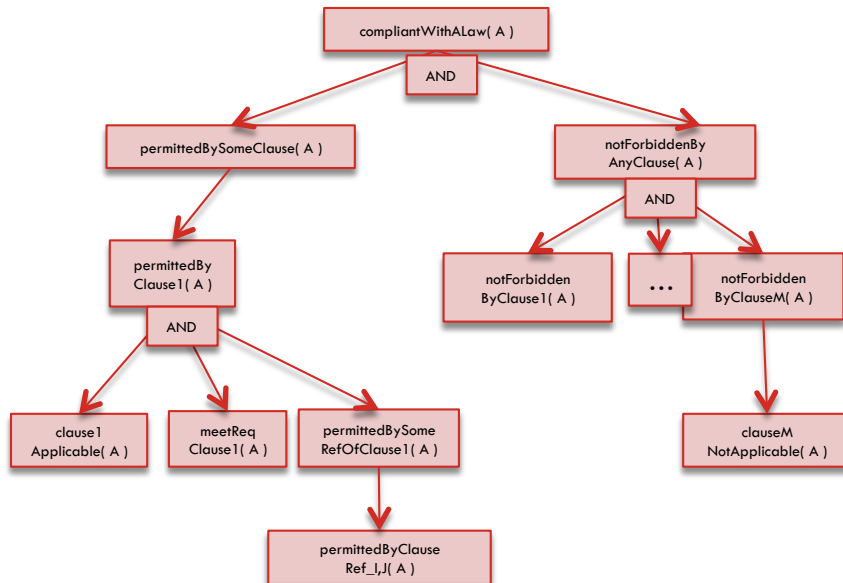

**HIPAA Law**

§ 164.502 Uses and disclosures of protected health information: general rules.  
 (a) Standard. A covered entity may not use or disclose protected health information, except as permitted or required by this subpart or by subpart C of part 160 of this subchapter.  
 (1) Permitted uses and disclosures. A covered entity is permitted to use or disclose protected health information as follows:  
 (i) To the individual;  
 (ii) For treatment, payment, or health care operations, as permitted by and in compliance with § 164.506;  
 (iii) Incident to a use or disclosure otherwise permitted or required by this subpart, provided that the covered entity has complied with the applicable requirements of § 164.502(b), § 164.514(d), and § 164.530(c) with respect to such otherwise permitted

## Data segmentation

**Health Record**

- Medications
- Previous diagnoses
- Labs

**Sensitive conditions**

According to research by the California HealthCare Foundation, 15 percent of patients who know their information will be shared would hide information from their doctor, and another 33 percent would consider hiding information[1].

# Example

5

## Medications

- 1. Tylenol
- 2. Sudafed
- 3. AZT
- 4. Bactrim

## Problem List

- 1. Headache
- 2. Sinus Infection
- 3. HIV positive
- 4. UTI

## Letter

I hope you and your partner had a great weekend in Provincetown and that the thrush has improved with the mouthwash sample I gave you.

# Example

6

## Medications

- 1. Tylenol
- 2. Sudafed
- 3. AZT
- 4. Bactrim

## Problem List

- 1. Headache
- 2. Sinus Infection
- 3. ~~HIV positive~~
- 4. UTI

## Letter

I hope you and your partner had a great weekend in Provincetown and that the thrush has improved with the mouthwash sample I gave you.

Hide HIV/AIDS ICD-9 code 042

# Example

7

## Medications

- 1. Tylenol
- 2. Sudafed
- 3. ~~AZT~~ → +side effects
- 4. Bactrim

## Problem List

- 1. Headache
- 2. Sinus Infection
- 3. ~~HIV~~ positive
- 4. UTI

## Letter

I hope you and your partner had a great weekend in Provincetown and that the thrush has improved with the mouthwash sample I gave you.

Zidovudine (INN) or azidothymidine (AZT) is a type of antiretroviral drug used for the treatment of **HIV/AIDS**.

*Side effects: anemia, neutropenia, hepatotoxicity, cardiomyopathy, and myopathy*

# Example

8

## Medications

- 1. Tylenol
- 2. Sudafed
- 3. ~~AZI~~ +side effects
- 4. **Bactrim**

## Problem List

- 1. Headache
- 2. Sinus Infection
- 3. ~~HIV~~ positive
- 4. UTI

?

## Letter

I hope you and your partner had a great weekend in Provincetown and that the thrush has improved with the mouthwash sample I gave you.

**Trimethoprim/sulfamethoxazole or co-trimoxazole** (abbreviated SXT, TMP-SMX, TMP-SMZ or TMP-sulfa) is a sulfonamide antibiotic combination of trimethoprim and sulfamethoxazole, in the ratio of 1 to 5, used in the treatment of a **variety of bacterial infections.**

# Example

9

## Medications

- 1. Tylenol
- 2. Sudafed
- 3. ~~AZI~~ +side effects
- 4. Bactrim

## Problem List

- 1. Headache
- 2. Sinus Infection
- 3. ~~HIV positive~~
- 4. UTI

## Letter

I hope you and your partner had a great weekend in Provincetown and that the thrush has improved with the mouthwash sample I gave you.

Prophylaxis (preventative med) for immunocompromised patient?

Patient has urinary tract infection (UTI), plausibly deniable case.

# Example

10

## Medications

- 1. Tylenol
- 2. Sudafed
- 3. ~~AZT~~ +side effects
- 4. Bactrim

## Problem List

- 1. Headache
- 2. Sinus Infection
- 3. ~~HIV~~ positive
- 4. UTI

## Letter

I hope you and your **partner** had a great weekend in **Provincetown** and that the thrush has improved with the mouthwash sample I gave you.

Highest rate of same-sex couples in Provincetown, MA.

Karen Christel Krahulik,  
*Provincetown: From Pilgrim Landing to Gay Resort*, NYU Press, 2007, p. 51.

# Example

11

## Medications

- 1. Tylenol
- 2. Sudafed
- 3. ~~AZT~~ +side effects
- 4. Bactrim

## Problem List

- 1. Headache
- 2. Sinus Infection
- 3. ~~HIV~~ positive
- 4. UTI

## Letter

I hope you and your partner had a great weekend in Provincetown and that the **thrush** has improved with the **mouthwash** sample I gave you.

Candidiasis (thrush) - **Candidiasis or thrush** is a fungal infection (mycosis). Commonly causes mouth yeast infections, which manifest as white patches in the mouth. **15% of immuno-compromised patients may develop this.**

# Example

12

## Medications

- 1. Tylenol
- 2. Sudafed
- 3. ~~AZI~~ +side effects
- 4. Bactrim

## Problem List

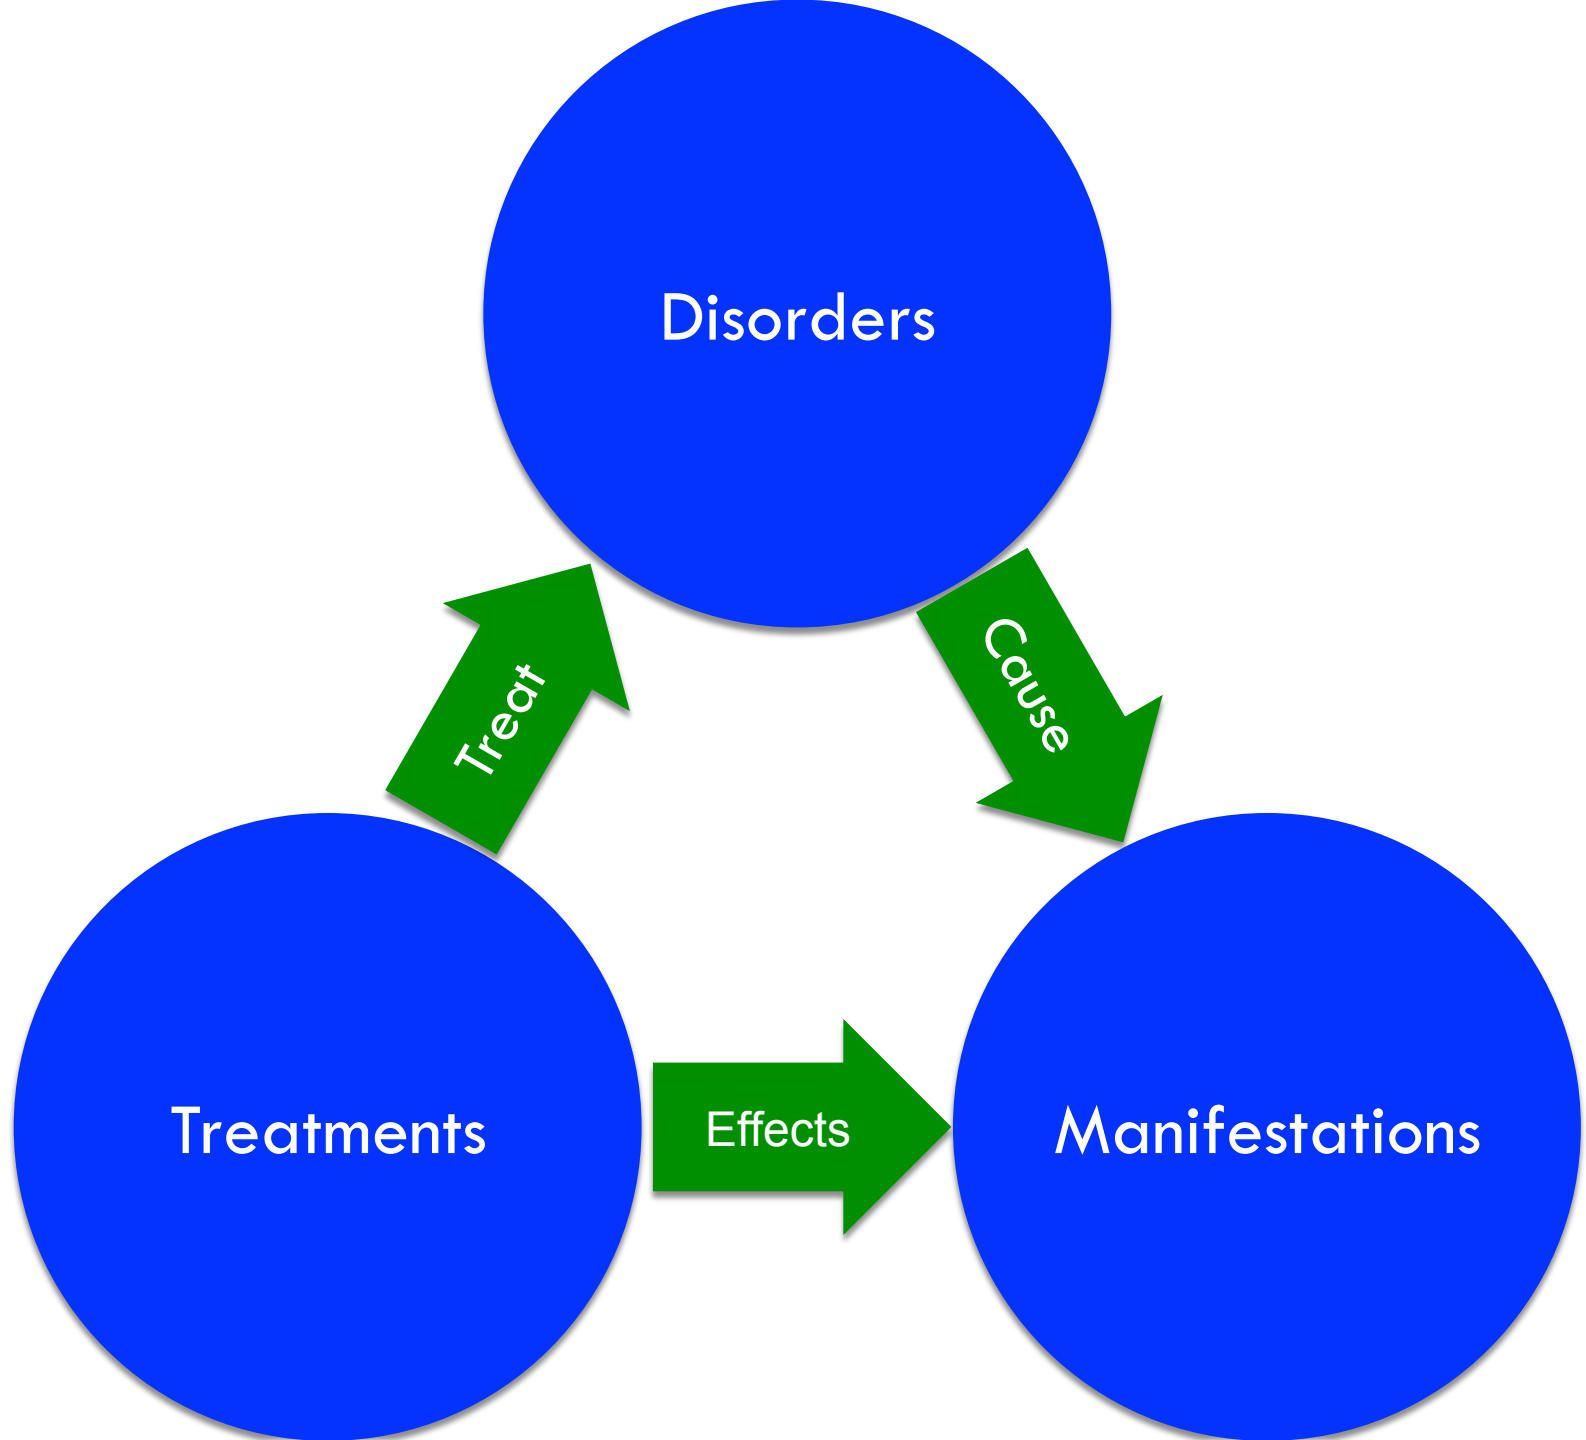

- 1. Headache
- 2. Sinus Infection
- 3. ~~HIV~~ positive
- 4. UTI

## Letter

I hope you and your partner had a great weekend in Provincetown and that the thrush has improved with the mouthwash sample I gave you.

Headaches & HIV: 24/535 patients – 4.5%  
CDC NHDS 2010 dataset. 115,000  
patients.

Mononucleosis-like symptoms

Disorders

Cause

Treat

Treatments

Effects

Manifestations

# Threat Model

- Attacker has direct access to redacted health record, medical literature
- Attacker does not have the computational capability to circumvent security mechanisms that protect the primary sensitive codes

# Treatments

15

Concept	Description	Links	Notes
Risperidone	Treats schizophrenia, bipolar disorder, and autism.	schizophrenia, bipolar disorder, autism, weight gain, insomnia, alopecia	Use of Risperidone usually implies treatment of a mental health disorder.
Carbamazepine	Anti-convulsant and mood-stabilizing drug. Treats epilepsy and bipolar disorder.	epilepsy, bipolar disorder, headaches, drowsiness	Primarily used to treat mental health disorders. Could be used off-label to treat Complex regional pain syndrome(ICD9: 337.21)
Citalopram	Primarily used as an SSRI to treat depression. Can also be used to treat hot flashes.	depression, hot flashes, anorgasmia, nausea, diarrhea	Can treat both sensitive and non-sensitive conditions.
Lamotrigine	Primarily used as an anticonvulsant drug to treat epilepsy and bipolar disorder. Can also treat migraines.	epilepsy, bipolar disorder, migraines	Can be used to treat mental health disorders or migraines.

# Formal model

16

## Hypothesis

$\{d_1, d_3\}$

$\{d_2, d_3\}$

$\{d_1, d_2, d_3\}$

$\{d_1, d_2\}$

Reggia's set cover model

- Plausibility – set cover
- Likelihood – Occam's razor and fitness

# Formal model

17

## Hypothesis

$\{d_1, d_3\}$

$\{d_2, d_3\}$

$\{d_1, d_2, d_3\}$

$\{d_1, d_2\}$

Reggia's set cover model

- Plausibility – set cover
- Likelihood – Occam's razor and fitness

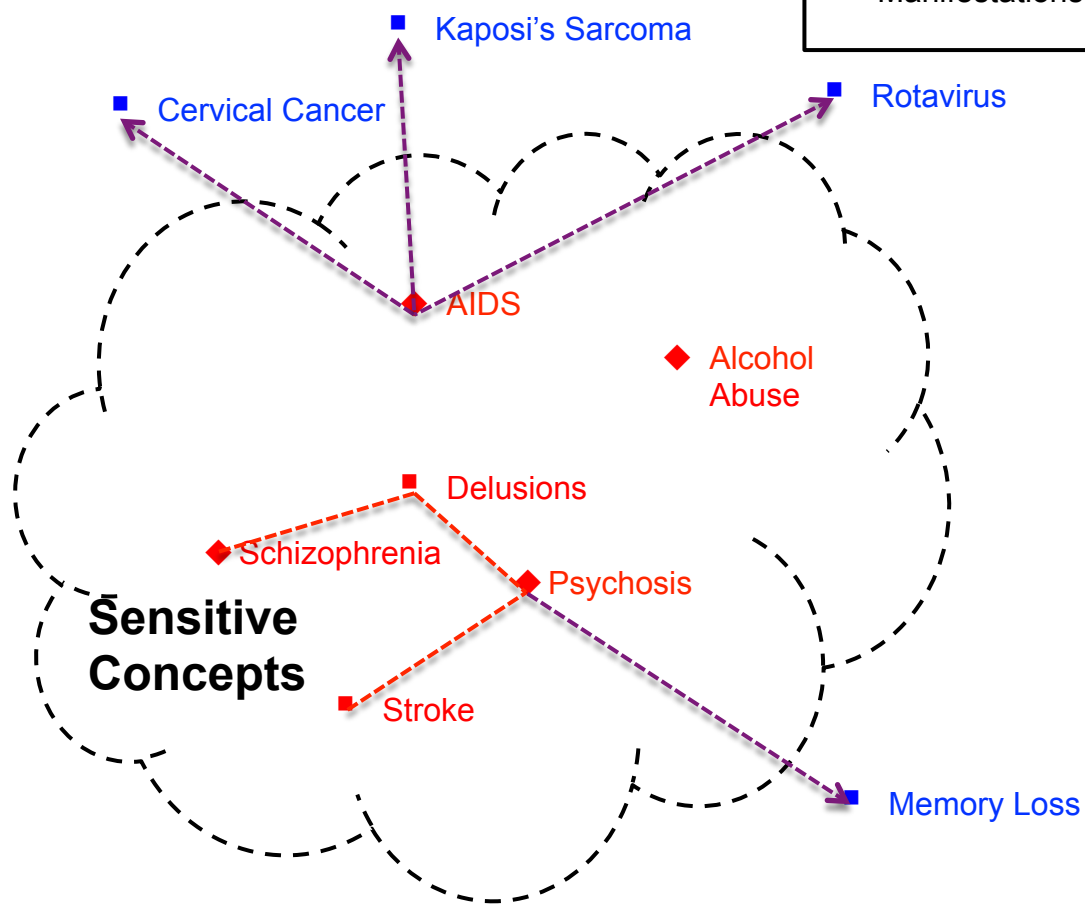

# Explanation of manifestations

18

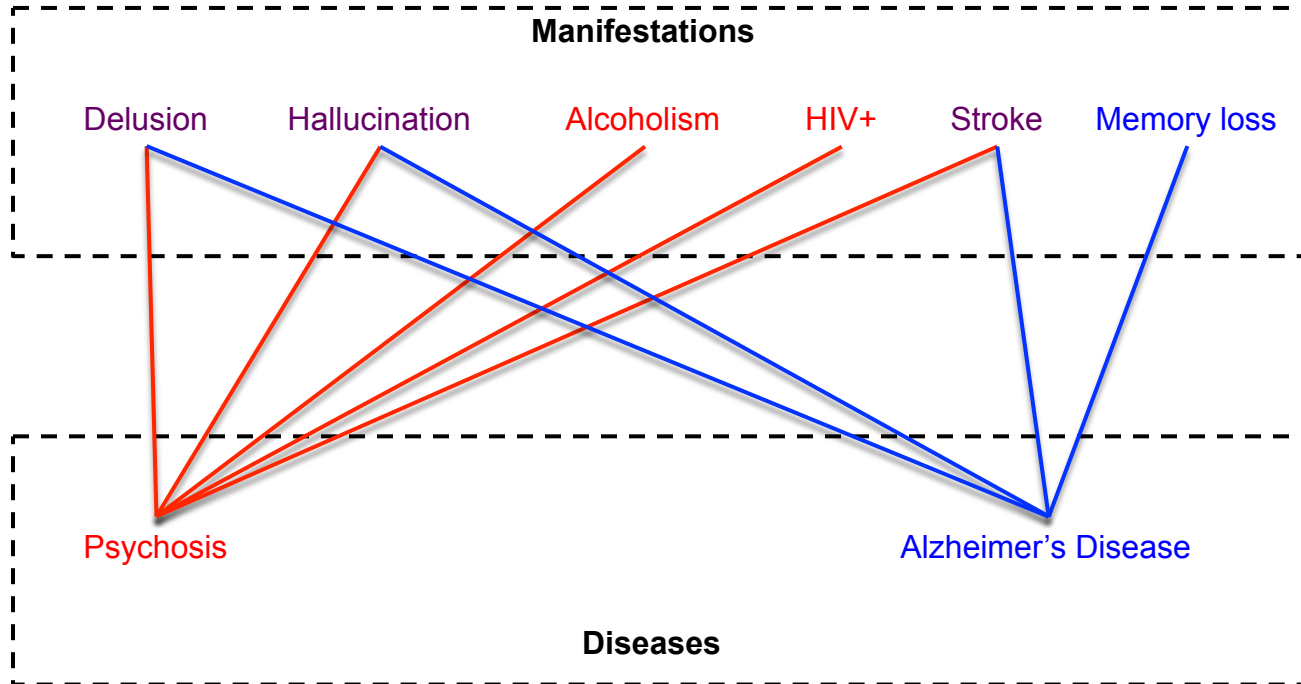

- Best explanation  $E$  of manifestations:
  - ▣ Covers all observed manifestations  $M+$
  - ▣ Is the simplest (parsimonious) definition
  
- Heuristics for “best cover”
  - ▣ Minimality -  $|E|$  is minimal
  - ▣ Criticism: minimal cardinality covers can be too restrictive
    - Occam’s razor vs Hickam’s dictum
  - ▣ Irredundancy – removing any disorder results in a non-cover of  $M+$
  - ▣ Relevancy – Every  $d$  in  $D$  must be causally associated with some  $m$  in  $M+$

# Medical concepts

◆ Diseases  
■ Manifestations

**Sensitive Concepts**

Source: PubMed, NIH.gov

# Predicate-Reducer definition

21

A – Medical algorithm

$\pi$  – Policy determines sensitive code s

M – Medical record

Predicate  $P(M, \pi)$  – Determines if  $s \in M$

Reducer  $R(M, \pi)$  – Removes s from M

Ideal reducer  $A(m) = A(R_{\pi}(m)) \forall m \in M$

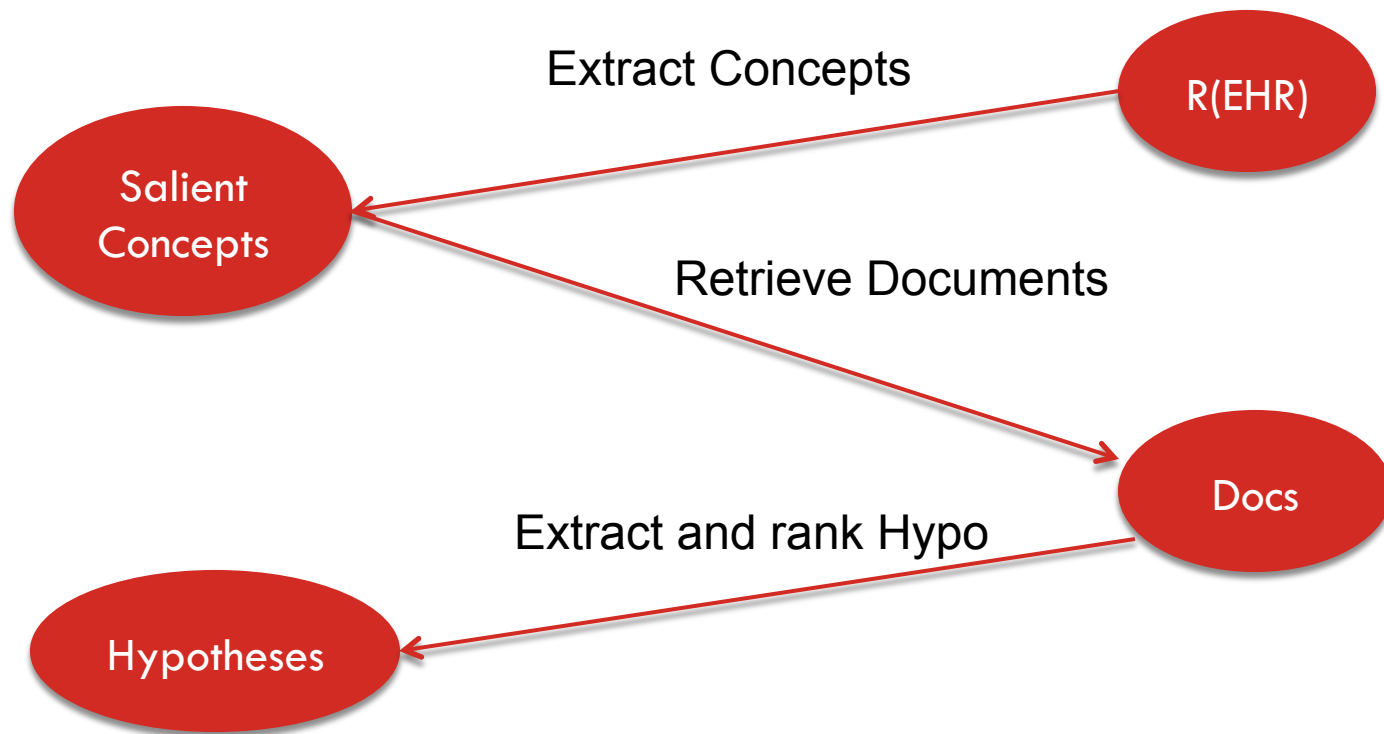

# Inference approach

22

- Input: Reduce(Diseases U Manifestations U Treatments)
- Output: Inferred Diseases
  
- 1. For each input, evoke hypotheses
- 2. Evaluate hypotheses
- 3. Rank hypotheses according to fitness
  
- Hypothesis fitness
  - Competing hypotheses, e.g.  $d_1$  or  $d_2$

# Algorithm overview

# Algorithm overview

24

```
hypotheses  $\leftarrow \emptyset$ ;  
repeat  
  query  $\leftarrow \emptyset$ ;  
  for  $j = 1 \rightarrow numTerms$  do  
    /* select a concept from the EHR using  
       a probability distribution */  
    x  $\leftarrow select\_concept(concept\_probs, EHR)$   
    query  $\leftarrow query \cup x$ ;  
  end  
  /* search for docs that contain the query  
     terms */  
  sr  $\leftarrow search(query, knowledge\_base)$  ;  
  /* Identifies hypotheses from medical  
     concepts in documents */  
  hypotheses  $\leftarrow update\_hyp(hypotheses, sr)$ ;  
  /* Evaluates hypotheses according to  
     plausibility criteria */  
  results  $\leftarrow eval\_hypotheses(hypotheses) \cup results$ ;  
until convergence;  
rank(results);
```

**Algorithm 1:** Inference algorithm

# Concept Support Index

25

## Concept Support Index

Let  $H \subseteq W$  be a set of concepts representing a hypothesis that the patient has had the medical manifestations, diseases, and treatments in  $H$ . Let  $h \in H$  be a particular concept in  $H$ , then the Concept Support Index with respect to a medical knowledge document  $doc$  is defined as:

$$CSI(h, doc) = \frac{Count(h, doc)}{\sum_{w \in W} Count(w, doc)} \quad (1)$$

$$CSI(H, doc) = \sum_{h \in H} CSI(h, doc) \cdot w_h \quad (2)$$

, where  $w_h \in [0, 1]$ ,  $\sum_{h \in H} w_h = 1$ , and  $Count(h, doc)$  counts the number of occurrences of  $h$  in  $doc$ .

# Hypothesis Fitness Index

26

$$HFI(H, Docs) = \sum_{doc \in Docs} CSI(H, doc) \cdot weight(doc, H) \quad (3)$$

where  $weight(H, doc)$  is a weighting function. One such function could be BM25 [20, 30, 34], which is defined as

$$BM25(D, Q) = \sum_{q_i \in Q} IDF(q_i) \cdot \frac{f(q_i, D) \cdot (k_1 + 1)}{f(q_i, D) + k_1 \cdot (1 - b + b \cdot \frac{|D|}{avgdl})}, \quad (4)$$

where

$$IDF(q_i) = \log \frac{N - n(q_i) + 0.5}{n(q_i) + 0.5}, \quad (5)$$

$f(q_i, D)$  is the term frequency of  $q_i$  in  $D$ ,  $k_1 \in \mathbb{R}^+$ ,  $b \in [0, 1]$ , and  $avgdl$  is the average document length of  $Docs$ .

# Results

Condition	Query	Results	Medical codes	Notes
Rett Syndrome	"wringing" AND "female" AND "constipation" AND "scoliosis"	3 articles suggest Rett Syndrome.	F84.2, R09.0, K59.0, 737.0	Pubmed
Rett Syndrome	"wringing" AND "female" AND "constipation" AND "scoliosis"	1.73M results, 5 of top 10 results suggest Rett Syndrome, including NIH Medline.	F84.2, R09.0, K59.0, 737.0	Google
AIDS	"Toxoplasmosis" AND "Hepatitis B" AND "Encephalopathy" AND "Progressive multifocal leukoencephalopathy" AND "Cryptococcosis"	140,000 results. 5 of top 10 suggest AIDS.	130, 070.2, 348.30, 046.3, 117.5	Google
AIDS	...	18,000 results. >8 of top 10 suggest AIDS.	130, 070.2, 348.30, 046.3, 117.5	Bing

# Possible defenses

28

- Deniability through relative strengths of hypotheses
  - ▣ Hide non-sensitive EHR as well
  - ▣ Enhance competing hypothesis, e.g. Citalopram
  - ▣ Association rule hiding
